## **Take Control of your Audio/Video with 1AVCenter!**

**Sao Paulo, SP** PCWinSoft Systems Ltd has released 1AVCenter, a powerful Windows application that does the work of an entire library of audio and video applications. 1AVCenter is an all-in-one software for screen capture, video capture, audio capture, webcam capture, computer monitoring, home security monitoring, desktop screen live broadcast, webcam broadcast, streaming video capture, webcam Internet publishing, and secure file sharing.

1AVCenter is an all-in-one audio video center that gives you the power to capture, record, broadcast, and even remotely monitor video and audio from any available source on your PC including the desktop screen, webcam, TV tuner card, external video capture card, and audio. You can save your files directly into JPG, AVI, WMV, WAV, MP3, or WMA formats. While some programs limit your options, 1AVCenter lets you work with streaming video, streaming audio, Internet media files, TV tuners, webcams, VCRs, microphones, CDs, line-in and aux input, YouTube videos, Google videos, Yahoo videos, AOL videos, Windows Media Player, external audio and video capture devices, firewire video cameras, and any music or movie that appears on your computer screen.

1AVCenter is among other things a digital audio and video recorder designed to work with the highest quality audio and video files. 1AVCenter supports the full range of CODECs available on the PC, as well as the industry-standard formats that are used to capture and record top-quality music and movies. In addition to producing the highest quality multimedia files, the program also supports Windows Media Encoder Technology (WMA and WMV files), enabling you to produce small files designed for the Internet and for portable devices.

You can use 1AVCenter to record video from the entire desktop screen, a window, any region of the screen, and from any video capture device connected to the system such as a webcam or a tv tuner card, and turn it into a compressed AVI or WMV at any desired quality level and size. 1AVCenter is also a powerful audio recorder. You can record audio from any available source and turn it into a compressed WAV, MP3 or WMA file at any desired quality level and size. In a nutshell, If you can see it or hear it on your PC, you can use 1AVCenter to make a high-quality copy of it.

1AVCenter is also a multipurpose remote monitoring system with the ability to remain completely stealth. You can use 1AVCenter as a computer monitoring software to remotely monitor how your computer is being used by your children or your employees. Or you can use 1AVCenter as a home security monitoring software to secure your infant's room, or your office. 1AVCenter can be activated when it detects motion from your webcam, activity from your desktop, or sounds from your microphone. The built-in web server allows you to review all activity detected from anywhere using any web browser.

1AVCenter is a digital broadcasting software as well. You can set 1AVCenter to live broadcast video and audio from any available source. Want to do computer screen broadcasting? 1AVCenter can do it. Want to do webcam live video broadcasting? 1AVCenter got your back. Want to do tv turner broadcasting? No problem. 1AVCenter works in two layers: The first is the audio video source. The second are the tasks you apply to the source. That is why you can live broadcast or do any other task using any combination of audio video sources you chose, or even audio alone.

1AVCenter has one more audio video feature that is worth talking about. The program is a video capture device internet publisher. With 1AVCenter you can publish your webcam or your computer desktop screen to a website by capturing images on regular intervals and then uploading to the internet using the FTP protocol. Images captured and uploaded can be time-stamped, and the period in which you want to publish can be scheduled to happen once a day, or even all the time.

To top it off, 1AVCenter was designed with a built-in web server to let users share audio, video, photo, image, and document files securely over the internet. The web server locks out unauthorized people, and only lets you share your files with people to whom you have given passwords. You can move your movies and music to a website via FTP. You can email your media files. And you can personalize your website to your own taste, with complete control over the site's colors, background images, and text.

Whether you're a business owner who wants to monitor your employees, a small business owner who wants to stream live video in your company website, a home-owner who wants to keep an eye on the home while working, a home user who wants to grab online movies and share with friends, a music lover who wants to record your favorite internet radios, a webcam power user who wants to record your live chatting conversations, or simply someone who does not understand why you have to use so many different programs to handle your audio and video devices, then 1AVCenter might be just what you have been waiting for.

1AVCenter runs under Windows 98/Me/NT4/2000/XP/2003/Media Center/Vista-32/Vista-64, was reviewed by Tucows and received their prestigious 5 cow award, and may be purchased securely online from PCWinSoft Systems Ltd. You can download a free trial version from the same web address. For more information, contact PCWinSoft Systems Ltd, R Fonseca da Costa 59, Jardim da Saude, Sao Paulo, 04151060 Brazil.
