## **Stream Desktop On Free Chat Programs and Websites!**

**Sao Paulo, SP** PCWinSoft Systems Ltd has released ScreenCamera, a powerful gadget for Windows that allows users to stream the computer desktop along with the webcam on free online video chatting programs and websites. ScreenCamera can be used by multiple applications simultaneously and works perfectly with MSN Messenger, Skype, Yahoo Messenger, AOL Messenger, Live Messenger, ICQ, PalPalk, Camfrog, AIM, AOL Messenger, Stickam, AnyWebcam, or any other free video chatting program or website.

ScreenCamera can be used to provide cost-effective remote technical support, demonstrate software applications, review documents, give presentations, do video sharing, photo sharing, and more. But what really sets ScreenCamera apart is the ability to stream the webcam and the desktop screen together at the same time, thus bringing users a new and enhanced sharing experience, proving to be not only a great way to supply live customer support, but also a innovative way to share data and collaborate with others remotely quickly and easily.

In addition to webcam and desktop sharing ScreenCamera overcomes Microsoft Windows limitation of not allowing a webcam to be used by more than one application. ScreenCamera allows the user to split the webcam on multiple applications simultaneously by creating a virtual camera recognized by the system that can be selected as the video source on any number of video enabled instant messengers, video conferencing programs, or live video chatting websites.

The program is designed to work with the desktop screen and webcam simultaneously supporting sizing, positioning, and changing of settings on-the-go without ever stopping the video output. ScreenCamera is also designed to allow easy desktop manipulation with zero interference while sharing the desktop screen. It even remains invisible for those remotely viewing your desktop.

With its emphasis on easy desktop manipulation, ScreenCamera's interface consists only of a floating toolbar from which users can quickly size and position webcam and desktop, select only one of them at a time, or switch between them. From the same toolbar users can easily capture parts of the desktop instead of the entire screen such as a window, a region, a region around the mouse cursor, and even an exclusive window that can be hidden behind others.

ScreenCamera will fit the needs of business owners who want to provide live technical support to their customers without spending lots of money; home users who want to share photos and play movies using their preferred instant messenger; executives who are looking for a cost-effective way to review documents or deliver online computer software training; or simply of those who need to use video webcam chat capabilities on multiple applications simultaneously.

ScreenCamera runs under Windows 2000/XP/2003/Media Center/Vista, and may be purchased securely on-line from ScreenCamera Order Page. You can download a free trial version from ScreenCamera Download Page. For more information, contact PCWinSoft Systems Ltd, R Fonseca da Costa 59, Jardim da Saude, Sao Paulo, 04151060 Brazil.
